

Building better lessons

Ximbus is a convenient & easy-to-use web-based platform, allowing for Lesson Preparation & Presentation, Collaborative Whiteboarding and Integration with Google G-Suite. With 4 simple steps to collaboration – Single Sign on, build a lesson, choose your contacts and then present, Ximbus gives teachers more control on how students navigate the lesson content, allowing for monitoring of student progress.

Teachers can gather resources and prepare lessons using Google documents, YouTube videos, images, links, audio, maps & more and incorporates enriched classroom control, easy polling options, whiteboard functionality, and annotation tools.

Google Drive integration

Designed for G-Suite schools, Ximbus is convenient and easy to use with a simple sign in process via your education email address. Pre-build lessons using any resources stored in Google Drive, Connect to Google Classroom or access your Google Contacts for the lesson and simply post the lesson into Google Classroom with a single click.

Multi-file formats compatible

A large variety of file formats are support within Ximbus which can all be added into a single lesson. As well as Microsoft Office documents, images and YouTube videos, you can also add webpages and links enriching the quality of lesson content available.

Annotate over content

Add real time annotations over your pre-saved content or create additional whiteboard sketches to your lessons content or over any file format. These annotations can either be temporary instructions which can be erased or they can be saved and linked for a permanent addition to the lesson.

Easily monitor students activity

Instantly know who is present, absent or who has lost concentration and navigated away from your lesson using the effective and easy-to-use Class Management functionality.

Student analytics

Gain a deeper insight into student progress and advancements with the individual student analytics including the length of time spent on a specific slide helping to refine lessons styles. Students can also view their own self-study analytics within Ximbus.

More control

Control how students navigate the lesson content with in-class controls and various presenting methods. Students can join live lessons or open a self-paced lesson from their own student dashboard. Quickly divert attention back to you with a click of the "Eyes Up" button.

Consolidate understanding

With one-touch polling questions, teachers can poll at any time within their lesson, improving engagement and retentions. Live results are obtained there and then allowing for further discussions instantly if they are required.

Flip the classroom

Students can access lesson plans prior to coming to class. Connect & deliver your lessons via Google Classroom, or via Google Contacts. Teachers can edit a lesson pre/post class. It will update for students in real time removing the need to rebuild or redeliver the lesson.
