

case study

“Our students are delighted with the high-resolution, 4K visuals of the Avocor E series, meaning that every student can see the screen content clearly. Our teaching staff were also delighted with the interactivity of the display and how precise and accurate the glass makes annotations. They were also very impressed that the display doesn't require orientation, making a reduction in lesson downtime.”

Although the school are just starting their journey with Avocor, they are hugely positive about how the displays will help to improve the learning environment for their students.

“We are really happy with the overall support we have with Avocor to date, from the initial engagement through to deployment and post-sale, the team have been fantastic, ensuring that we have the very best experience with the Avocor solution. We are looking forward to embracing the solution as part of the school's journey to a more collaborative and exciting learning environment for our students.”

Faringdon Community College chose the Avocor E series with key features including:

- Optically bonded, 2mm glass for a smooth and precise writing experience
- 20 x ultra-fast, individual touch points
- Features pen aware functionality, delivering quick transition between finger, pen and palm use.
- Includes 30W front facing speakers for a crisp audio environment
- Optimised for Windows 10 with anti-fingerprint and anti-glare glass as well as edge swipe functionality.
